PCP	Priya Nandakumar, MD	PCP NPI	1841992307
EMPLOYER	Front Range Logistics		

CHIEF COMPLAINT

Frontal headache, dizziness, and nausea for three days, worse this morning with poor oral intake.

HISTORY OF PRESENT ILLNESS

Ms. Whitfield is a 41-year-old woman with type 2 diabetes mellitus, essential hypertension, chronic migraine, hyperlipidemia, and GERD who presents after urgent care hydration. She reports three days of worsening frontal headache with photophobia, dizziness, and nausea. Home fingerstick glucose this morning was 212 mg/dL. She received one liter of normal saline and ondansetron 4 mg at urgent care yesterday with partial relief.

ALLERGIES

Penicillin (pruritic rash in childhood). Sulfonamides (hives). No known latex allergy.

HOME MEDICATIONS

- Metformin 1000 mg PO twice daily
- Lisinopril 20 mg PO once daily
- Atorvastatin 40 mg PO nightly
- Sumatriptan 50 mg PO as needed for migraine
- Ondansetron 4 mg PO every 8 hours as needed for nausea

VITALS

BP 158/94 mmHg HR 98 bpm Temp 98.4 F SpO2 98% on room air POC glucose 212 mg/dL

ASSESSMENT

Migraine flare with mild dehydration and hyperglycemia. Neurologic exam non-focal, with low concern for an acute intracranial process given a stable exam and improvement after hydration.

PLAN

- Oral hydration and ibuprofen 400 mg every 6 hours as needed.
- Resume home medications; recheck fasting glucose with PCP.
- PCP follow-up within 48 hours and neurology within two weeks.

RETURN PRECAUTIONS

Return immediately for chest pain, repeated vomiting, syncope, confusion, focal weakness, or the worst headache of life.

DISPOSITION

Discharged home in stable condition. Work status: may return to work on 06/03/2026.
